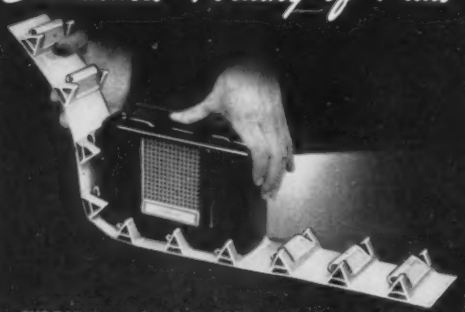
SUS-RAP SIMPLIFIED PACKAGING FOR FRAGILE PRODUCTS

Eliminates Folding of Pads



SUS-RAP is produced in widths, slot sizes, and various strength qualities to ECONOMICALLY package YOUR product . . .

Exclusive VERTICAL-HORIZONTAL suspension safeguards your product both in and out of its shipping carton.

SUS-RAP is engineered to your product and pretested by N.S.T. procedures

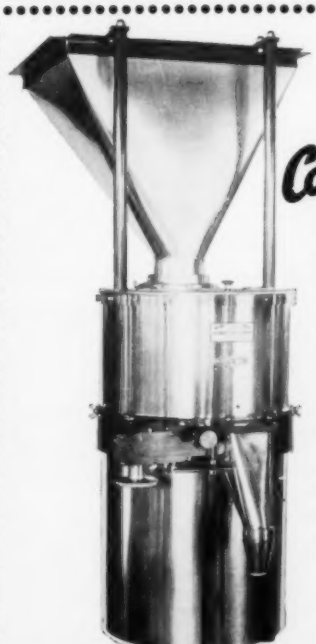
Laboratory Developed and Tested Packaging

VANANT COMPANY, INC. 955 S. Water Street, Milwaukee 4, Wis.



Controlled PACKAGING

MODEL A PAK KING

Metric-Flow Filler: New patented stream-flow metering accurately measures milligrams, grams, ounces. In capacity ranges 1/10 gram to 2 oz. and 1/8 oz. to 10 oz. or 1 lb. at speeds up to 150 per minute. For coffees, teas, spices, drugs, insecticides, grated cheese, flours—virtually any dry free-flowing material. Special adaptations have two discharge spouts for double production, ram pressure fill or bulk and finish loading.

Write for descriptive Catalog No. 55 on this and other WEIGH RIGHT low-cost, better-performing tools of packaging.

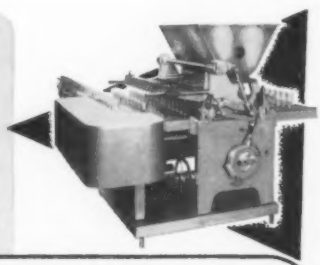
fill all types of SEMI-LIQUIDS and SEMI-SOLIDS with GEYER



FILLING MACHINES

and get many outstanding benefits

You can fill foods, dairy products, cosmetics, drugs, lubricants and chemicals with GEYER filling machines and get these outstanding benefits: greater accuracy of fill, faster changeover from one size container to another, the handling of any type container, ease of cleaning and long, trouble-free life. Leaders in many different industries using GEYER equipment get these benefits every day.

To make sure your containers are free from foreign matter when filled, use the GEYER ROLL-OVER CLEANER. It removes glass pieces, dust and dirt from containers by inverting them 180 degrees and cleaning by air blast. This roll-over method is safety insurance for any packer because it assures positive cleaning. Speeds are from 40 to 200 containers per minute.

GEYER equipment is available in any size to meet your need. Write or call for details.

Peters

Bag Sealing and Header Applying Machine

automatically seals bags and applies labels at speeds up to 70 per minute

Let our engineers show you how Peters can help you do a better job faster—and at lower cost!

Peters Model L-2 Bag Sealing and Header Applying Machine receives filled gusset-type cellophane bags from packing conveyor, times them into machine, tucks gusset, applies header or label, heat-seals bag and label, and discharges completed package—one of many high-speed, cost cutting packaging machines described in Peters literature—yours on request.

Peters

For 60 years originators and builders of high speed automatic packaging and bakery machines.

Packaging group pays off: New operation succeeds.	October	25
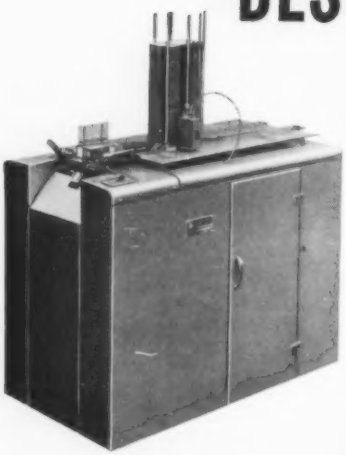
Planning, installing, and maintaining a packaging line, by C. H. Parsons.	February	27
Pro's and con's of constant and intermittent motions in automatic packaging machines, by R. F. Windstrup.	February	32
Providing equipment to code-mark cases in limited space, by Wayne S. Madden.	May	46
Reducing the number of packaging items for automatic washers.	June	38
Simple package for mercury switches eliminates breakage, increases production efficiency, by S. P. Schumacher.	March	57
Technique of developing "one-shot" deal packaging on a production line basis, by B. J. Pettibone.	March	21
Wheeling and dealing: Let's mechanize our deal type operations, by L. W. Smith and J. L. Smith.	June	28
Equipment Development. Cooling tunnel makes year-around paste-wax packaging practical, by Joseph Petrancosta.	October	48
Machinery. Correcting the causes of package defects, by L. E. Eisen.	July	44
Factors affecting packaging line speed, by F. P. Kessler.	September	19
Pro's and con's of constant and intermittent motions in automatic packaging machines, by R. F. Windstrup.	February	32
Wheeling and dealing: Let's mechanize our deal type operations, by L. W. Smith and J. L. Smith.	June	28
Machinery Maintenance. Keeping machinery clean pays maintenance dividends, by C. J Bruckner.	April	60
Machine Testing. A practical approach to a weight-control program, by J. E. Reynolds. Part I	November	52
Part II	December	35
Odor and Flavor Transfer Taking a "new look" at our odor, flavor transfer problems, by S. F. Brockington.	January	27
Packaging Line Layout. Developing facilities for sterile products packaging, by N. C. Kirsch.	March	28
Planning, installing, and maintaining a packaging line area, by C. H. Parsons.	February	27
Performance Requirements. Printing of collapsible tubes, by M. K. Dresden.	July	19
Permeability Permeability of plastic bottle materials, by A. R. Nielsen and E. J. Temple.	January	21
Permeation effects of bottle size and weight, by A. R. Nielsen and E. J. Temple.	August	25
Research and Development. Analyzing the adhesion operation, by F. C. Campins and Daniel Siegel.	March	34
A close look at polystyrene film, by R. J. McCormick. Part I	June	21
Part II	July	23
Cooling tunnel makes year-around paste-wax packaging practical, by Joseph Petrancosta.	October	48
Developing facilities for sterile products packaging, by N. C. Kirsch.	March	28
Do you know enough about your product to choose the right lining for its container?	November	60
Evaluating the performance of a packaging line, by C. C. Sutton.	May	23
Faster setting adhesives boost production line speeds, by Thomas Flanagan.	April	25
How to locate optimum placement of cushioning for liquids in glass containers, by A. C. Beardsell and J. J. Kipnees. Part I	October	34
Part II	November	38
Part III	December	49
Inspire your workers to produce effective pack-		

	Month	Page
ages, by Robert F. Dale.	December	42
Look at other factors, too, when choosing a lining.	November	65
Looking at physical principles that explain packaging tests, by Martin S. Peterson.	April	36
Nails and their characteristics in boxes and crates, by L. O. Anderson.	April	52
A new polyester film, by P. J. Vaughan.	November	27
Nitrogen: A propellant for pressurized packages, by M. J. Root.	May	28
Permeability of plastic bottle materials, by A. R. Nielsen and E. J. Temple.	January	21
Permeation effects of bottle size and weight, by A. R. Nielsen and E. J. Temple.	August	25
Polyethylene density: Yardstick of classification and performance, by K. A. Kaufmann and John Morris.	September	22
A practical approach to a weight control program, by J. E. Reynolds. Part I	November	52
Part II	December	35
Simple package for mercury switches eliminates breakage, increases production efficiency, by S. P. Schumacher.	March	57
Taking a "new look" at our odor, flavor transfer problems, by S. F. Brockington.	January	27
Testing of molded styrene for packaging applications, by Bennett Nathanson.	October	54
Using a calculator to compute box strength.	September	54
Sampling. A practical approach to a weight-control program, by John E. Reynolds. Part II	December	35
Quality control of container components, by B. R. A. Smith.	August	38
Specifications Engineering approach leads to economical packaging standardization, by Nick Stuffer.	January	38
How packaging information flows through a manufacturing organization, by Duane O. Culligan.	May	52
Inspire your workers to produce effective packages, by Robert F. Dale.	December	42
Packaging group pays off: New operation succeeds.	October	25
Tests and Testing. A close look at polystyrene film, by R. J. McCormick. Part I	June	21
Part II	July	23
Effect of packaging on keeping quality of frozen bread and sponge cake, by J. D. Winter and S. R. Trantanella.	August	32
Factors affecting modern wood package engineering, by Olive Salembier.	February	50
Faster setting adhesives boost production line speeds, by Thomas Flanagan.	April	25
How packaging information flows through a manufacturing organization, by Duane O. Culligan.	May	52
How to locate optimum placement of cushioning for liquids in glass containers, by A. C. Beardsell and J. J. Kipnees. Part I	October	34
Part II	November	38
Part III	December	49
Know your program, then sell it to management, by Keith N. Stought.	February	37
Looking at physical principles that explain packaging tests, by Martin S. Peterson.	April	36
Nitrogen: A propellant for pressurized packages, by M. J. Root.	May	28
Permeability of plastic bottle materials, by A. R. Nielsen and E. J. Temple.	January	21
Permeation effects of bottle size and weight, by A. R. Nielsen and E. J. Temple.	August	25
Polyethylene density: Yardstick of classification and performance, by K. A. Kaufmann and John Morris.	September	22
Realistic policies on package weight control, by W. G. Hoskins.	November	46
Taking a "new look" at our odor, flavor transfer problems, by S. F. Brockington.	January	27
Testing of molded styrene for packaging applications, by Bennett Nathanson.	October	27
Using a calculator to compute box strength.	September	54

STILL YOUR BEST BUY!



for speeds up to 75 cartons per minute, this semi-automatic time-saver cuts hand-cartoning costs 70%. Still only $2675

MODEL 50 TUCK-O-MAT

1958 articles available free

We have free copies available of most of our 1958 articles. Among the many reprints on hand are:

A close look at polystyrene film, by R. J. McCormick

Reduction in packaging costs through "value analysis," by B. F. Major

Quality control of container components by B. R. A. Smith

Write our Reader Service Department for copies of these or any other articles you need.
